SUMMARY

Senior Software Engineer with 5 years at OneBill Software building enterprise billing, subscription, and usage-rating platforms. Leads GenAI and data platform work — agentic AI selfcare chatbot (LangGraph, AWS Bedrock), Service Desk RAG auto-response, and serverless reporting on AWS Glue, Athena, and Iceberg. Track record of 10x performance wins on batch billing, high-throughput CDR pipelines, and production-scale platform migrations.

TECHNICAL EXPERTISE

Languages:	Java, Python, JavaScript, SQL, Bash	Backend:	Spring Boot, Spring Security, Hibernate, JPA, React, JUnit, Maven
Cloud:	AWS Lambda, S3, Step Functions, Glue, DMS, Athena, EC2, SQS	GenAI:	AWS Bedrock, LangGraph, RAG, Cohere Rerank, Vector Search, Langfuse, Langsmith
Data:	Kafka, Redis, Redisson, Cuckoo Filter, MySQL, MongoDB, Apache Iceberg	DevOps:	Docker, Jenkins, CI/CD, Git, Linux, CloudWatch

WORK EXPERIENCE

Senior Software Engineer - GenAI & Backend Platforms, OneBill Software Inc.

May 2023 - Present

- Built Agentic AI selfcare chatbot (LangGraph, AWS Bedrock) with API tool calls; Supervisor routes Billing, RAG, and Service Desk agents with streaming, follow-ups, and semantic/supervisor caching.
- Built Service Desk RAG auto-response: Kafka-synced closed tickets indexed by a Python consumer (GPT-OSS-120B → MongoDB vectors); new tickets answered via vector search with Claude Sonnet 4.5.
- Architected a data lake report framework on AWS (DMS, Glue ETL, Athena, S3, Iceberg), moving long-running reports off production OLTP to serverless pipelines with scheduled delivery.
- Led platform-wide cache migration from Infinispan to Redis/Redisson across auth, usage rating, grant balances, and account caches; introduced Cuckoo filters (RedisBloom) for duplicate CDR detection, cutting lookup response times by **85% (800ms to 120ms)** and database load by **60%**.
- Built Redis-backed grant balance caching with distributed locks, currency-grant support, read-only cache invalidation, and MySQL balance sync for high-concurrency usage consumption across parent and child accounts.
- Re-engineered batch billing jobs using Java parallel streams and optimized queries, reducing execution time from **15 hours to 1.5 hours (90%)** and unblocking same-day invoice delivery.
- Built high-throughput CDR usage-rating pipeline with custom idempotency filters, selective file reprocessing and deletion, thread-safe BatchCDRdto handling, offline batch scaling for large CDR file volumes, and Redis-cached event rules for rating lookups.

Software Engineer, OneBill Software Inc.

May 2021 - May 2023

- Developed core billing, pricing, and usage-processing services for subscription and invoice workflows at **millions of records daily** scale.
- Built Vertex tax engine integration from initial implementation through P2P transactions, deferred tax, and address validation; extended delayed bill-time taxation across Avalara AvaTax, SureTax, and CSI with rule-based tax and tax-integrator configuration REST APIs.
- Built usage-rating enhancements for custom charges, invoice-group rounding, bulk usage overrides, and future-dated order flows.
- Implemented sponsored grants for shared usage balances across parent and child accounts, including consumption during usage rating, low-balance alerts, and grant details in invoice XML.
- Refactored legacy modules and optimized invoice/tax queries, improving performance by **35%**.

KEY ACHIEVEMENTS

- Led Team 404 (9 engineers) to **1st place** in the company-wide Roadmap Rally (8 teams, 66 engineers), achieving the highest score and **139% productivity** by driving rapid resolution of customer tickets and feature requests over a 55-day sprint.
- Led the winning team in a company hackathon by integrating Twilio APIs for automated multi-channel notifications (WhatsApp/SMS).
- Mentored junior engineers and led code reviews across billing and platform modules; promoted to Senior within 2 years.

EDUCATION

B.E. – Computer Science and Engineering

2017 - 2021

Government College of Engineering, Thanjavur · CGPA: 7.56
